To Whom I May Concern,

Applied Silicone Corporation has been the principle supplier of long term implantable silicone for Nagor products for the past 25 years. The history of our relationship actually goes back to 1980, when Nagor first began selling their own line of implantable devices in collaboration with International Silicone Corporation, which I cofounded along with Gordon and Nancy Evans (hence "Nagor") in 1979. Many of the silicone materials currently being supplied by ASC to Nagor are directly traceable to the formulations developed in the early 1980's.

Today, Applied Silicone Corporation specializes in implantable grade silicones to companies maintaining the highest standards and quality systems in compliance with FDA and ISO regulations. Our products are designed and tested to meet the requirements for our customer's applications and to meet ISO 10993 biocompatibility guidelines for long term implantable devices. We have over 30 FDA Master Files and an extensive data base of biocompatibility testing, including 4 lifetime bioassays and 4 teratology studies relevant to Nagor breast implants. We have been ISO 9001 certified for "*Design and Manufacture of Silicone Raw Materials for Medical Device Applications*" since 1985 and are regularly audited for compliance with GMP based manufacturing by our customers.

Another important aspect of our relationship with Nagor is that we maintain an open and continual dialog through on site visits and technical service from our highly experienced staff at our manufacturing facilities. We believe this is the only way to ensure we are using the best available materials, manufacturing and quality systems for critical long term implantable devices.

ASC is proud of our relationship with Nagor and the 32-year history of successful incorporation of our silicone formulations into their products.

Sincerely,

Alastair Winn
President
